(enter if previously assigned)**SNC080149****County: El Dorado County****Applicant: El Dorado Irrigation District****Project Title: Hazel Meadow Restoration Project****PROJECT GOAL**

To restore, diversify, and preserve the habitat of Hazel Meadow for the protection of water quality in Jenkinson Lake, enhanced public recreational opportunities and education consistent with the Sly Park Recreation Area (SPRA) Master Plan.

PROJECT SCOPE

The Hazel Meadow project involves restoration of 1.4 acres and expansion of 1.0 acre of meadow habitat, totaling 2.4 acres. The project encompasses re-contouring the site to natural topographic and hydrologic conditions, removing and relocating incompatible uses from the meadow, reestablishing a sustainable meadow ecosystem, and redeveloping recreational and educational facilities and access. The ADA-accessible boardwalk is an integral component of the overall meadow restoration project, providing access through the meadow to the lake. The boardwalk will allow visitors to access the meadow and lake without affecting vegetation, soil, and water quality. Interpretive stations on the boardwalk will educate visitors about the meadow restoration, habitat, watershed, and water quality issues. Without the boardwalk, this non-intrusive ADA compliant access would not be possible. El Dorado Irrigation District (EID) is collaborating with the California Department of Fish and Game (CDFG), the Boy Scouts of America, and the Girl Scouts of America to implement the project. In recognizing the importance of this project, CDFG is providing funding to cover costs associated with materials for all components except for the boardwalk and platform. This grant application is a request for funding of the boardwalk and platform. The boardwalk and platform is critical to protection of the meadow and water quality and therefore the success and sustainability of this restoration project.
